

**GOVERNMENT OF INDIA
OFFICE OF THE DIRECTOR GENERAL OF CIVIL AVIATION OPPOSITE
SAFDARJUNG AIRPORT, NEW DELHI**

**CIVIL AVIATION REQUIREMENTS
SECTION 2 - AIRWORTHINESS
SERIES 'E', PART VIII,
ISSUE IV, DATED 30th MAY, 2008**

EFFECTIVE: FORTHWITH

F. No. 11-690/Sec-2/E-VIII/2012-AI(2)

Subject: Approval of Organisations - Category 'G' - Training Institutes.

1 INTRODUCTION

- 1.1 Rule 61 stipulates that for grant of Aircraft Maintenance Engineer's (AME) licence, applicants who have passed a course from DGCA approved institutes will be granted one year relaxation in the total aeronautical maintenance experience required. It is, therefore, necessary that the approved institutes provide a high standard of training to their students. This part of CAR deals with the approval of Training Institutes under Rule 133B, for imparting ab- initio training to students in the field of Aircraft Maintenance Engineering in the following streams , and prescribes the minimum requirements for grant of approval and its continuity :-
- (a) Mechanical stream (Aeroplane and Powerplants) -- comprising of Light Aeroplanes (LA), Heavy Aeroplanes (HA), Piston Engine (PE) and Jet Engine (JE).
 - (b) Mechanical stream (Helicopters and Powerplants) -- comprising of Rotary Wing Aircraft (RA), Piston Engine (PE) and Jet Engine (JE).
 - (c) Avionics stream - comprising of Electrical System (ES), Instrument System (IS) and Radio Navigation System (RN).
- 1.2 The period of training in the approved training institute will be counted as maintenance experience for the purpose of computing total aeronautical experience required to become eligible for appearing in the AME licence examinations.

1.3 OBJECTIVES OF TRAINING

The training course in the field of aircraft maintenance engineering should be designed to give the students a comprehensive knowledge of aircraft and its systems, and the good maintenance practices to enable them to become skilled and competent maintenance professionals. The essential instructions must include the following, to enable them to acquire AME licence issued by DGCA.

- (i) Knowledge of Aircraft Manual (India), Civil Aviation Requirements, Airworthiness Advisory Circulars etc.
- (ii) Theoretical and practical technical knowledge of design, construction, maintenance and operation of aircraft, engines, systems and aircraft materials used in construction of airframes, engines and accessories.
- (iii) Knowledge of engineering practices and skill in the use of various equipment, general and special tools used in aircraft maintenance;
- (iv) Knowledge of good maintenance practices, human factors and human performance, necessary judgment and competence required to assess the airworthiness of aircraft and its equipment.

2 APPLICABILITY

2.1 From 1st July 2008, all approved institutes shall meet the requirements of this CAR

2.2 Fresh approvals or extension of the scope of approval to cover additional stream shall not be considered in accordance with this CAR as the licencing requirements have been replaced by CAR-66. Training institutes desirous of seeking fresh approval to train aircraft maintenance personnel for obtaining AME licence in category B1 or B2 shall meet the requirements stipulated for the purpose. However, such applications that are under various stages of processing at DGCA may be considered for issue of approval in accordance with this CAR.

2.3 Existing DGCA approved training institutes are required to comply with the current revisions of this CAR by 31st May 2012.

2.4 This CAR will cease to be in force with effect from 1st August 2020 and approved institutes establishing full compliance with this CAR may admit fresh batch of students during July 2017. Admission of students beyond the stipulated period shall be in accordance with the new approval covering the training programme for category B1 and / or B2 of AME licence

3 Reserved

INTENTIONALLY LEFT BLANK

4 REQUIREMENTS FOR APPROVAL

- 4.1 The institute shall comply with the following requirements for continuation of the approval. Part approval in Mechanical or Avionics stream or semester wise approval or provisional approval shall not be continued.
- 4.2 A para-wise compliance report of this CAR along with necessary evidences as Annexure shall be submitted by the institutes to the local airworthiness office. On receipt of the report, the institute's CAR compliance status will be assessed by representatives of DGCA.
- 4.3 Personnel Requirements
 - 4.3.1 **Accountable Manager:** The organisation shall nominate an accountable manager who has corporate authority for ensuring that all infrastructure and training requirements are financed and carried out to the standards required by this CAR. The accountable manager shall:

- (i) ensure that all necessary resources are made available for providing training in accordance with this CAR to support the institute's continued approval; and
- (ii) demonstrate a basic understanding of this CAR.

4.3.1.1 In case of absence of Accountable Manager for more than 60 days, the DGCA approval to the Institute is deemed to be suspended till another suitably qualified person nominated by institute is accepted by Regional Director of Airworthiness.

4.3.2 Chief Instructor :- The institute shall nominate suitable persons as Chief Instructor and Deputy Chief Instructor. The nominated persons shall be examined and approved, if found suitable by a duly constituted board. The approval shall be granted by Regional Director of Airworthiness.

4.3.2.1 Qualifications and experience

The Chief Instructor/ Deputy Chief Instructor shall have the following minimum qualification and experience:

- (a) Basic licence (BAMEL) in a stream related to the scope of the approval, or Degree in Engineering or equivalent qualification in the field of Aeronautical/ Mechanical/ Electrical/ Electronics/ Instrument engineering. He should also have passed Paper I (Regulations) of AME licence examination.
- (b) For Basic licence holders, five years practical experience in aviation industry out of which a minimum two years in the field of instruction. For engineering graduates, two years practical experience in aviation industry out of which a minimum of one year in the field of instruction.

4.3.2.2.1 Chief Instructor and Deputy Chief Instructor(s) should together cover the entire scope of approval.

Note: - Experienced persons already functioning as Chief Instructor/ Dy. Chief Instructor/Instructor may continue to exercise the privileges of their approval.

4.3.2.3 In case of absence of Chief Instructor for more than 30 days, the DGCA approval to the Institute is deemed to be suspended till another suitably qualified person nominated by institute is approved by Regional Director of Airworthiness. During such absence, the accountable manger shall nominate a suitable person to act as C.I.

4.3.2.4 In case Chief Instructor wants to leave the institute, a notice of 45 days has to be given to the institute and a copy to be submitted to the Regional and local Airworthiness office.

4.3.3 Instructors: - The institute will employ adequate number of qualified and experienced Instructors for imparting both theoretical and practical

training to the students. The instructors will be approved by Chief Instructor. In addition to the required compliment of regular instructors, part time instructors may also be employed for imparting training on Engineering drawing, Computers and Human Factors subjects.

4.3.3.1 Qualifications and experience

The Instructors should be knowledgeable and duly qualified to undertake the instruction in the assigned subjects. The institute should have balanced staff of persons suitably qualified in all subjects listed in the syllabi. The instructors should have an aptitude for teaching and should be patient, enthusiastic and be able to keep discipline.

The instructors should have the following minimum qualifications in the relevant discipline:

- (a) Basic license (BAMEL) in any category, or
Degree in Engineering in Aeronautical/ Mechanical/ Electrical/ Electronics/ Instruments engineering, or
Diploma in any of the above disciplines, or
Bachelor of Science with Physics, Chemistry and Maths/ Bachelor of Science (Electronics)
- (b) One year practical/instructional experience for holders of Engineering degree or BAMEL, and three years practical/instructional experience in aviation industry for others.
- (c) Instructors assigned to teach paper I (Air Law, Airworthiness Requirements & Human Performance) should have passed paper I of AME licence examination.
- (d) Instructors teaching Paper-III subjects should have passed paper-III of the relevant category or have adequate maintenance experience in the relevant category.

INTENTIONALLY LEFT BLANK

- 4.4 The overall ratio of whole-time instructors to students shall not be more than 1:30 per subject class. An instructor may teach maximum of two subjects. In general, a training school requires at least two instructors for each range of subjects to ensure continuity of program in the event one instructor being absent. When circumstances permit the program can be made more interesting by having additional guest lecturers.
- Institutes seeking or having approval in any stream shall satisfy the DGCA that the number of instructors available is adequate to smoothly conduct the training programme for the enrolled batches.

INTENTIONALLY LEFT BLANK

- 4.5. Duties and Responsibilities of Chief Instructor
- 4.5.1 The Chief Instructor shall be responsible for the conduct of training in accordance with the approved Training Manual and shall ensure that all the conditions of approval are complied with.
- 4.5.2 He shall ensure that appropriately qualified instructors are available in adequate number to cover specific subjects.
- 4.5.3 He shall ensure that each student admitted for the course possesses minimum qualifications and fulfils the criteria for admission as stipulated in the CAR and the approved training manual. The medical standards of the students as required for an AME shall be ensured.
- 4.5.4 He shall ensure that the aircraft, engines, items of equipment, mock-ups and other training aids are kept in clean and serviceable condition for demonstration and practical training.
- 4.5.5 He shall ensure that adequate quantity of reference books are available in the institute library. In addition, he shall ensure that each student is in possession of Aircraft Manual (India), Civil Aviation Requirements and other instructions and amendments thereof, issued by DGCA from time to time. The Chief Instructor shall also ensure that lesson plans and class room notes are

prepared and issued to all students on various subjects. He shall also ensure that each student maintains his log book and shall certify the same.

- 4.5.6 He shall ensure that a high standard of instruction is maintained.
- 4.5.7 He shall be responsible for setting up question papers, conducting examinations, checking of papers, etc. and to conduct examinations of various semesters in a time bound and fair manner.
- 4.5.8 He shall ensure that records of proper attendance of each student are maintained.
- 4.5.9 He shall ensure that permanent record of all students admitted to the course and their progression through the various semesters of the course is maintained.
- 4.5.10 He shall be responsible for submitting reports on intakes and results of semester examinations to the local airworthiness office by 15th of August of every year and after each semester examination respectively.
- 4.5.11 He shall forward the applications of all eligible candidates to the CEO for appearing in the AME licence examinations conducted by DGCA. Where required, he shall also issue photo identity card to all candidates issued with the computer number by CEO.
- 4.5.12 He shall maintain record of each candidate's results of DGCA licence examinations and submit reports to the local Airworthiness office after each session.
- 4.5.13 He shall make arrangements for on the job training (OJT) for students and monitor the performance of students during their OJT. He shall ensure that the students maintain daily logbooks during this period.
- 4.5.14 He shall issue the course completion certificate after successful completion of the course including the mandatory OJT.
- 4.5.15 He shall ensure that security clearance of foreign students is duly obtained through DGCA before admitting them for the course.
- 4.5.16 He shall ensure that due facilities are provided to DGCA officers for inspection of the institute.
- 4.6 Requirements:
 - 4.6.1 Facilities and Equipment Requirements:
 - (a) The institute should preferably have its own premises, or premises taken on long term lease (five years). The institute shall not be established in residential areas. They should be established in areas permitted by the local administrative authorities. For this purpose, an NOC from local

administration authority shall be required or documentary evidence in this case is also acceptable. The existing AME institutes shall shift their location from residential areas by 31st July 2010. A Quarterly progress made in this regard is to be submitted to DGCA Hqrs.

- (b) Adequate number of class rooms for theoretical classes shall be available. For initial approval, at least three class rooms, each properly equipped with training aids must be available.
- (c) The class rooms shall be properly lighted, well ventilated, furnished and free from noise. The size of the rooms shall be appropriate to accommodate 30 number of students at a time. As a guideline, each room should be at least of 33 sq. mts area.
- (d) The institute should have hangar/adequate covered area to park the Aircraft/Helicopter for demonstration and for performing practical exercises on the aircraft.
- (e) The institute shall have well equipped facilities for the training of students in General Engineering practices (basic electrical work, sheet metal work) and aircraft maintenance practices. In addition separate facilities shall be established or arranged on contract for demonstrating welding, heat treatment, NDT, composite material shop etc. (Appendix II)
- (f) The institute shall have well equipped facilities in Mechanical and Avionics fields, commensurate with the scope of approval sought. (Appendix II)
- (g) Each facility shall be equipped with tools / equipment, used for General Engineering and for specific jobs.
- (h) Facility requirements specified in paragraph '4.6.1 to 4.17.3 and Appendix II to V' shall be suitable for imparting subject knowledge and development of aircraft maintenance skill required for an aircraft maintenance personnel to work on 'airframe and engine' and / or 'electrical, instrument and radio' systems, components and equipment during line and base maintenance and familiarise the trainees with relevant technology and process. The facility required for familiarizing / demonstration / functional check of inspection or functional checks of aircraft systems and component shall confine to 'as installed on the aircraft' unless specifically mentioned.

Note: Facilities available with another organisation may be utilised for training purpose through a legally valid; viable contract (from logistic and instructional point), when specifically mentioned in this CAR

- 4.6.2 In the interest of maintaining high instructional standards and for establishing proper rapport between the students and the teacher, the number of students in a batch or class shall not exceed 30.
- 4.6.3 In one academic year, induction of only two batches per stream is permitted. Each batch shall not have more than 30 students.
- 4.6.4 Institutes seeking approval in Mechanical stream (Aeroplane and Power plant) should have an appropriate aeroplane commensurate with the scope of approval (pressurized aeroplane fuselage) with landing gear and most of the primary instruments and systems functioning. Alternately, the institute should have at least one light all metal/composite aeroplane complete with engine in running condition, instruments, landing gear etc. functioning and detailed mock-ups of all the aircraft systems, replicating the actual aircraft systems. The aeroplane need not have C of A but should have systems in operating condition for imparting practical training.
- 4.6.5 Institutes seeking approval in Mechanical stream (Helicopter and Power plant), should have at least one helicopter with landing gear and most of the primary instruments and systems functioning. Alternately, the institute should have at least one light Helicopter with engine in running condition with rotor off, instruments, landing gear etc. functioning and a detailed mock-up of all the helicopter systems, for example, functioning of swash plates, collective and cyclic mixing unit etc. replicating the actual helicopter systems.

- The Helicopter need not have C of A but should have systems in operating condition for imparting practical training.
- 4.6.6 Intentionally Left Blank
- 4.6.7 In case an institute seeks approval in Avionics stream, it must possess one pressurized aeroplane or an IFR certified helicopter adequately fitted with avionics, complete with engines running, landing gear and instruments and systems functioning. Alternately, have a detailed mock-up of all the aircraft avionics systems, replicating the Aircraft avionics systems, for example actual working of auto pilot and interfacing of the associated instruments/systems, simulation of instruments reading etc.
- 4.6.8 Providing OJT to the students in the relevant stream is the responsibility of the organization and a proper system should exist and detailed in the training manual. The details of system wise aircraft maintenance tasks to be performed by the students during the OJT should be documented in the training manual. Arrangements for OJT of all the fifth semester students should be completed two months prior to the examination.
- 4.6.9 The institutes who do not have pressurized aeroplane or Helicopter complete with engine(s) running and intend to provide OJT to the students shall make legally valid and viable contract with a aircraft maintenance organisations having DGCA approval to maintain aircraft and engine covered by the scope of approval of the training institute for providing actual aircraft maintenance experience. The practical training experience should also cover the activities listed in Appendix “V” of this CAR.
- 4.6.9.1 Institutes having their own aeroplane as required in Para 4.6.4/5/7 (without alternate arrangements) and the Aircraft/Helicopter engine(s) are in running condition may provide OJT as per the scope of approval on the aeroplane owned by them provided the facilities available are suitable for performing Aircraft maintenance task in accordance with the manufacturer’s recommended safety guidelines. The students should be able to carry out the maintenance tasks and other checks listed in the training manual. The institutes shall have trained person(s) who should be able to ground run and demonstrate the systems of the aeroplane to the students. These person(s) may not be licensed AMEs or factory trained, but should be fully aware of the ground run up, maintenance and repair procedures to be followed on the aeroplane. The practical training experience (OJT) should be as specified in Appendix “V” of this CAR.
- 4.6.10 Existing Institutes who have their own pressurized aircraft as required in Para 4.6.4/5/7 but the engine(s) are not running should have an external power supply to demonstrate the various systems checks on the Aircraft, like fire warning, fuel quantity indications, generator on line, landing Gear extension and retraction, battery charging, warnings etc. These systems checks should be the same as those required before and during ground run procedure. These institutes are not allowed to provide OJT to their students in their premises on Jet engine and unserviceable aircraft system.
These institutes should have legally valid and viable contract made with DGCA approved maintenance organizations for imparting OJT on the Jet Engine and relevant aircraft system to all the students enrolled by the institute.
Note: Institutes shall have necessary contract with approved aircraft maintenance organisations to perform OJT on Jet engine and systems that are not serviceable in the aircraft held by them.

- 4.6.11 The institute shall have a library having a stock of books commensurate with the number of students. One set of books per 10 students should be procured by the institute for issue to the students as course text books. Adequate number of suggested reference books should also be made available in the library. The list of books recommended for the training institute is given in Appendix VIII. The library shall also have manufacturer's technical literature in respect of the aircraft / engine / aircraft system used for training purpose within its premises to carry out removal / installation and other maintenance activities. The Library should be equipped with photocopier and sufficient numbers of computers with access to internet facility for students.
- 4.6.12 The institute should have OHP and / or LCD projectors in each class room, for use by the trainees and instructors.
- 4.6.13 Sufficient training aids, demonstration equipment and study material should be available to facilitate complete comprehension of the instruction given.
- 4.6.14 Contractual arrangement made by the training institute for familiarising, demonstration, operation and providing OJT should be legally valid and viable from logistic point for imparting the training. The validity of the contract should cover the entire training period of all batches of students pursuing the training at the institute. Contracted facilities shall not have any accessibility limitation to the instructors and the trainees.
Note: Audio visuals may be used as a supplementary means of practically familiarizing the trainee on subject matter. It may be used as primary teaching aid in respect of subject matter having only academic interest or technology no longer in use. Training institutes imparting practical lessons with the use of audio visuals while the students are at the institute shall detail the additional practical exercises to be demonstrated and / or performed during or at end of the semester and person responsible to monitor the training in the legally valid contract signed with the organisations.
- 4.7 Institutes desirous of seeking approval in any of the Mechanical stream shall have the following facilities for airframe maintenance skill development.
- 4.7.1 BASIC WORKSHOP AND MAINTENANCE PRACTICES –**
- Fixed wing / Rotary wing.
- 4.7.1.1 Introduction
- a) Training in workshop practice should begin with exercises in the use of hand tools to make a series of simple shapes to specified dimensions from various metals. Each shape should be progressively more complicated with more precise tolerances. From the start, instructors should ensure that students develop the habit of handling basic hand or machine tools in the correct manner, and action should be taken to correct any bad or potentially dangerous practices before they become habitual. At all times, and particularly during the early stages of training, the importance of producing accurate and careful work must be stressed. These exercises can be used to develop the trainees' inspection ability, i.e., the necessary judgment and sense of responsibility required to assess the accuracy of their own work and that of others.
- b) The students should have the opportunity to remove and replace system components. Practice in inspection functions during simulated maintenance activities is considered an important training element in this phase.

4.7.1.2 Bench fitting

Cutting and filing: exercises in cutting metal with hacksaws; filing;
Drilling; drill grinding; thread cutting with taps and dies; and scraping.

Measurements: use of steel rule, dividers, callipers, micrometres,
Vernier, combination set, surface plate, and dial test indicator.

4.7.1.3 Forging, Heat Treatment, Soldering and welding.

Forging and hand forging, simple specimens such as chisels, punches
and others

Hardening and tempering carbon steel by using
forge Soldering and use of proper flux

Welding: oxyacetylene and metallic arc welding of different materials

Inspection of welded joints for flaws.

Note: - Forging, heat treatment and welding familiarisation can be out
sourced.

4.7.1.4 Sheet metal work

Sheet aluminium alloy: cutting, marking out, drilling, forming, bending,
bending allowances,

Familiarise shrinking and flashing.

Forming sheet metal by pressing and rolling.

Riveting: types of rivets, riveting with hand tools, rivet spacing,
countersinking and dimpling, use of pneumatic riveting hammer, blind
riveting, inspection of rivets, removal of rivets and use of oversized rivet.

Exercises in sheet metal patching and repair work.

Note: - Heat treatment of aluminium alloy and alloy rivets: use of salt
baths and furnaces; annealing and solution treatment can be out
sourced.

4.7.1.5 Machine shop

Drilling: using machine drills and drill holes in various materials; reaming
holes

Grinding: use of grinding wheels for tools sharpening

4.7.1.6 Wire and cable work

Inspection of aircraft cables for defects,
Tension adjustment on control cables.

4.7.1.7 Tube work

Tube bending, without heat treatment; Tube flaring.
Fitting of different kinds of unions used in fuel, oil and hydraulic
systems. Inspection and testing of tubes and flexible hoses

4.7.1.8 Airframe/Helicopter familiarization

Airframe/helicopter structures:
Familiarisation and inspection of,
Wing and fuselage construction, including primary and secondary
structures.
Forged, extruded, cast and sheet materials used.
Main joints: methods of riveting, spot welding, and adhesive bonding.

Doors and cut-outs, positions of inspection panels, removal of fairings,
and methods of gaining access to all parts of structure.

Landing gear component, system lay-out and function: examination of
system

Flight Control Systems: examination of control system; checking of
Control surface movements and cable tensions; interconnections of
autopilot to control systems; examination (by visiting airline, if
necessary) of power-operated control systems.

4.7.1.9 Ground handling of aircraft/helicopter Pre-

flight inspection of aircraft/helicopter.

Starting and running of engines; observation of instrument readings;
function check(s) of electrical components; stopping of engines

4.7.1.10 Use of ground equipment for moving, lifting or servicing aircraft

4.7.1.11 Installation and testing of equipment

Removal, replacement, in situ inspection, and function testing - Errors and electrical faults of electrical equipment.

4.7.1.12 Light Aircraft / helicopter

Removal, control surfaces, landing gear, wings/rotor blades, tail plane/tail rotor blades and fin, and seats

Note: - Removal and installation of Engine should be demonstrated to all students at-least once during the curriculum.

Inspection: inspection of condition of fuselage alignment checks, freedom from distortion, and symmetry

Checking of wings and other airframe components for condition, and freedom from distortion

Installation of wings/rotor blades, empennage, control surfaces, and engine; check rigging angles of wings and tail plane; adjust flying controls and check control surface movements; replace landing gear and check alignment track

4.7.1.13 Wheels and tyres

Wheel and brake - removal, inspection, installation and function check. Tyre inspection, identification of defects

Brake units: inspection

Inspection of anti-skid devices

INTENTIONALLY LEFT BLANK

4.7.1.14 Control surfaces

Inspection - metal-skinned ailerons, elevators and/or rotor blades. Hinges and actuating mechanisms: inspection

Correction of mass balance after repair of controls surfaces/rotor blades.

Adjustment of balance tabs, and servo-tabs on aircraft (to correct for hinge moments and flying faults).

4.7.1.15 Multi-engine aircraft/helicopter

Simulated airline check:

Familiarization with maintenance schedule

Performance of sample periodic inspection by the students, including signing of check sheets for each job done and recording of and, if possible, rectification of all defects.

Functional checks after replacement of representative cross-section of aircraft systems components, including ground testing of hydraulic system with retraction of landing gear and function testing of electrical system; ground running of engines. weighing of the aircraft and calculation of centre of gravity.

4.7.2 BASIC MAINTENANCE PRACTICES: REPAIR, MAINTENANCE AND FUNCTION TESTING OF AIRCRAFT/ HELICOPTER SYSTEMS / COMPONENT

Note: Aircraft system denoted by “*” may be outsourced

4.7.2.1 Hydraulic systems

Familiarise with Hydraulic fluids & system component and lay-out and perform servicing, minor maintenance and functional check of

Hydraulic reservoirs and accumulators;

Hydraulic pressure generation: electric, mechanical, *pneumatic;

Emergency hydraulic pressure generation; Hydraulic pressure Control;

Hydraulic power distribution;

Indication and warning systems;

Interface with other systems.

4.7.2.2 Pneumatic systems

Familiarise with 'Pneumatic / vacuum Systems' components and functioning of

Sources: engine /

*APU,; Pressure control;

Distribution;

Indications and warnings;

Interfaces with other systems.

4.7.2.3 Environmental control systems

Air supply

Familiarise with sources of air supply including engine bleed, *APU and ground cart;

Air Conditioning

Familiarise with the 'Air Conditioning System' components, layout (Air cycle and vapour cycle machines, Distribution systems; Flow, temperature and humidity control system) and demonstrate system functional check.

Pressurisation

Familiarise with 'Pressurisation System' components and layout (Control and indication including control and safety valves; Cabin pressure controllers)

Safety and warning devices

Familiarise with the components pressurisation system protection and warning devices and system layout.

4.7.2.4 Fire Control systems

Familiarise with the component, system layout and demonstrate functional check of fire and *smoke detection, warning systems; fire extinguishing systems and system tests.

4.7.2.5 De-icing systems

Familiarise with components, system and control of *de-icing systems: electrical, hot air, pneumatic and chemical;

INTENTIONALLY LEFT BLANK

4.7.2.6 Miscellaneous systems

*Familiarise with 'Water system' components and lay-out - supply, distribution, servicing and draining;

*Familiarise with toilet system lay-out, flushing and servicing;

Familiarise with oxygen system components, layout, supply, distribution and indication system

Familiarise with fuel system component and lay-out and perform servicing, minor maintenance

Fuel tanks;

Fuel supply systems; Dumping*, venting and draining; Cross-feed and transfer; Indications and warnings;

And fuel system functional check Refuelling

Familiarise with emergency equipment, seats, harnesses and belts

4.7.3 JOB/TASK DOCUMENTATION AND CONTROL PRACTICES

4.7.3.1 General servicing and maintenance practices of aircraft systems. (Applicable standard maintenance practices like wire locking, tightening torque for fasteners, pipe unions, electrical connectors etc.), minor fault diagnosis; perform representative systems component removal, fitment, inspection, adjustment, servicing and operational check.

4.7.3.2 Reserved

4.8 Reserved

4.8 Institutes desirous to seek approval in any of the Mechanical stream shall have the following facilities for ENGINE (Piston & Turbine engine) maintenance skill development.

4.8.1 BASIC MAINTENANCE PRACTICES: ENGINE AND PROPELLER

4.8.1.3 Reserved

4.8.1.4 Reserved

INTENTIONALLY LEFT BLANK

4.8.1.5 Reserved

4.8.1.6 Reserved

4.8.1.7 Reserved

4.8.1.8 Reserved

4.8.1.9 Reserved

4.8.1.10 Reserved

4.8.1.11 Reserved

4.8.1.12 Reserved

4.8.1.13 **GAS TURBINE ENGINE**

Familiarise with constructional arrangement of turbojet / turbofan / turbo shaft / turboprop, various inlet configurations; engine inlet, Axial and centrifugal types of compressor and constructional features, constructional features of combustion section, different types of turbine blade; blade to disk attachment; nozzle guide vanes, exhaust and various types of bearings

Familiarise with component and systems layout and perform operation of Engine lubrication system, fuel system including, fuel metering systems, air distribution and anti-ice control, sealing and external air services, start and ignition systems, fire detection and extinguishing systems, Indication Systems -Exhaust Gas Temperature/ Interstate Turbine Temperature, Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure and flow; Engine speed; Power indication system

Familiarise with gas coupled/free turbine; Reduction gears; Integrated engine and propeller controls; Over speed safety devices of turbo-prop engine and its operation.

* Familiarise with arrangements, drive systems, reduction gearing, couplings, control systems of turbo-shaft engines and its operation.

Demonstrate power plant removal and installation.

Applicable standard practices, minor fault diagnosis, perform representative engine systems component removal, fitment, inspection, adjustment, servicing and operational check.

Demonstrate engine starting and ground run-up

Note: * As applicable to the airframe / Engine covered by the scope of approval.

4.8.1.14 Familiarise with various piston engine construction - Crank case, Crank shaft, Cam shafts, Sumps; Accessory gearbox; Cylinder and Piston assemblies; Connecting rods, Inlet and exhaust manifolds; Valve mechanisms; Propeller reduction gearboxes. Various types of carburettors, Icing and heating system,

Familiarise with components and systems layout of piston engine fuel injection system components and operation, engine control and fuel metering systems, starting system, pre-heat system; magneto types, Ignition harnesses, spark plugs; low and high tension systems, induction systems including alternate air systems; exhaust systems and engine cooling systems, supercharging / turbo-charging systems, lubrication system, Indication Systems,

Demonstrate power plant removal and installation.

Perform representative engine systems component removal, fitment, inspection, adjustment, servicing and operational check.

Applicable standard practices, minor fault diagnosis, differential pressure test and rectification

Demonstrate engine starting and ground run-up

4.8.1.15 PROPELLER

Facility to familiarise high/low blade angle, reverse angle, angle of attack, blade station, blade face, blade shank, blade back and hub assembly; fixed pitch, controllable pitch, constant speed propeller and propeller/spinner attachment.

Familiarise with system layout and components of mechanical and electrical/electronic propeller speed control and pitch change mechanism, feathering and reverse pitch; over speed protection.

Demonstrate propeller removal and installation.

Perform representative propeller systems component removal, fitment, inspection, adjustment, servicing and operational check.

Facility to demonstrate propeller engine running

4.9 The recommended facilities, tools and equipment required to accomplish the maintenance skills as described in Para 4.8 are given in appendix “III”

4.10 Institutes desirous to seek approval in Avionics stream shall have the following facilities for AVIONICS (ELECTRICAL, INSTRUMENT, RADIO) maintenance skill development.

ELECTRICAL

4.10.1 Lead acid batteries

Check battery condition, specific gravity of electrolyte, battery charging practice; capacity, carry out discharge and insulation test;
Safety precautions

4.10.2 Nickel cadmium batteries

Checking of battery condition: determining state of charge, charging, etc. Checking of electrolyte level and insulation tests.

Deep cycling of nickel cadmium units.

4.10.3 Wire and cable work

Making up of wire lengths and specimen cable looms: soldering and crimping ends, identification of cables, and fitting plugs and sockets.

Cable tracing practice: continuity and insulation checks on cable runs. Practice in aircraft wiring

4.10.4 Bonding, continuity and insulation testing

Bonding checks: use of bonding tester or millimicro ohmeter Continuity and insulation tests on aircraft circuit; use of Megger testers.

4.10.5 Generators and electric motors

Familiarise with various parts of generators and electric motors and function

4.10.6 Voltage regulators, cut-outs and relays

Familiarise with various types of voltage regulators, battery cut-outs, reverse current relays, solenoids and relays from various circuits, thermal circuit breakers and function.

INTENTIONALLY LEFT BLANK

4.10.7 Alternators

Familiarise with various parts of alternators and function

Electromagnetic relays: inspection

4.10.8 Electric motors

Familiarise with aircraft various types of motors components and function (starters motors for piston and turbine aero engines, motors for fuel line pumps, hydraulics, propeller feathering, and windscreen wipers Linear and rotary actuators)

4.10.9 Inverters and converters

Familiarise with static invertors components and function.

INTENTIONALLY LEFT BLANK

4.10.10 Reserved

4.10.11 Electrical circuit equipment

Demonstration of the function of wide range of miscellaneous electrical components such as transducers, rectifiers, transformers, Wheatstone bridge and other balancing devices, and sensing elements

4.10.12 Electrical Power

Facility to familiarize with the 'Aircraft Electrical Power System' component, lay-out and perform functional check of Batteries; DC power generation; AC power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers and rectifiers, circuit protection and External / Ground power;

4.10.13 Lights

Facility to familiarise with component and lay-out and perform functional check of

External lights: navigation, landing, taxiing, ice;

Internal lights: cabin, cockpit, cargo;

Emergency lights.

4.11 INSTRUMENTS

Note: Aircraft instrument systems denoted by '**' may be outsourced alternately familiarisation of the systems may be carried out during field visit / OJT

4.11.1 Pressure indication

Familiarise with mechanically operated gauges and their function (e.g. Bourdon tube

Familiarise with pressure transducers, electrically-operated transmitters and their function

Familiarise with Electrically-operated gauges and their function

4.11.2 Instruments

Familiarise with the following instruments, system lay-out their function and maintenance check of

Pitot static system

Altimeter

Airspeed indicator

Machmeter

Rate of climb indicator

Altitude reporting/alerting systems;

Air data computers;

Instrument pneumatic systems;

Direct reading pressure and temperature gauges;

Temperature indicating systems;

Fuel quantity indicating systems;

Artificial horizons;

Slip indicators;

Directional gyros;

* Ground Proximity Warning Systems;

* Flight Data Recording systems;

* Electronic Flight Instrument Systems;

* Instrument warning systems including master warning systems and *
Centralised warning panels;

* Stall warning systems and angle of attack indicating systems;

* Vibration measurement and indication.

4.11.3 Reserved

4.11.4 Engine speed indication (ESI)

Familiarise with *ESI generators (DC and AC types) and their function:

Familiarise with ESI system and their function

Familiarise with Generators and gauges and their function

4.11.5 Thermometers and temperature indication

Engine temperature thermocouples: Familiarisation of cylinder head, jet-
pipe temperature system.

Familiarise with ratiometer temperature gauges and their function

Familiarise with various kinds of temperature sensing units (e.g. fire and overheating detectors, cabin air-duct).

4.11.6 Fuel contents indication

Familiarise with Float-operated desynn contents gauges and their function : demonstration of operation

Familiarise with Capacitance type contents gauges and their function: demonstration of operation

Familiarise with Flowmeters and their function

4.11.7 Compass systems

Familiarise with Magnetic compasses and their function:

Familiarise with Remote compass and their function:

Swing of compass with the available aircraft or mock-up: compensation practice.

4.11.8 Reserved

INTENTIONALLY LEFT BLANK

4.12.1 Facility to familiarise with the automatic flight control system component and lay-out and demonstrate functional test

Modes of operation: roll, pitch and yaw

channels; Yaw dampers;

Stability Augmentation System in

helicopters; Automatic trim control;

Autopilot navigation aids

interface; Autothrottle systems.

Facility to familiarise with the Automatic Landing Systems component and lay-out and demonstrate functional check of modes of operation, approach, glideslope, land, go-around, system monitors and failure conditions.

Note: Partial autoflight system familiarisation and demonstration exercises may be outsourced.

4.12.2 Reserved

4.13 RADIO

4.13.1 Radio workshop: Fundamental techniques

Familiarise with safety precautions associated with radio equipment hazards: high voltages, radio frequency (RF) emissions and microwave emissions, electrostatic discharge, etc.

Wiring and cabling: demonstration and practice in wiring and soldering radio circuits.

Multimeters, Megger and bonding testers / milliohmmeter: demonstrations and practice.

Identification and inspection of antenna: external wire aerials, blade, rod aerials, D/F loops, and suppressed aerials; viewing on aircraft, and inspection for physical condition.

Aerial masts, static dischargers, etc.: inspection and

servicing. Familiarise with the following system elements;

TRF receiver

Intermediate frequency amplifier

Frequency converter

Superheterodyne alignment

Buffer-doubler amplifier

RF amplifier

Modulation

Transmission lines

4.13.2 Demonstration of test procedures on airborne equipment

Identification: identity and location of principal types of airborne communication and navigation equipment: racking systems, power supplies, antennae and other interconnections.

4.13.3 Wiring, cabling and soldering techniques

Wiring: practice in stripping insulation; splicing; wiring to lugs; terminals and tube sockets; and dismantling, soldering and reassembly of connectors.

Cables: lacing of wires to form a cable, termination and soldering of cable ends, and serving of coaxial cables.

Soldering: practice with different sizes of soldering irons, different grades of solder, fluxes and types of connectors.

Handling of electrostatic sensitive devices.

4.13.4 Instrumentation

Multimeter: practice in measuring and calculating series and parallel resistance; voltage and current measurements on various circuits; others.

Megger: continuity and insulation tests on aircraft cable assemblies structure; practice with circuit boards;

Frequency metres: practice in frequency measurement.

Practice in measuring L, R, C and Q values

Signal generators: demonstration of cathode ray oscilloscope; demonstration of use of examine wave-forms, wave envelopes, and DC measurements.

4.13.5 Reserved

4.13.6 **Communication/Navigation**

Note: Functional check of radio system may be outsourced

Facility to familiarise with component and lay-out and demonstrate functional check of the following system

Very High Frequency (VHF) communication; High Frequency (HF) communication; Audio; Emergency Locator Transmitters; Cockpit Voice Recorder; Very High Frequency omnidirectional range (VOR); Automatic Direction Finding (ADF); Instrument Landing System (ILS); Flight Director systems; Distance Measuring Equipment (DME); Global Positioning System (GPS), Air Traffic Control transponder, Traffic Alert and Collision Avoidance System(TCAS); Weather avoidance radar; Radio altimeter;

Note: * Demonstration of functional check requiring radio transmission may be carried out during field visit or OJT. Radio communication may be performed adopting an equivalent means.

4.14 **REPAIR, MAINTENANCE AND FUNCTION TESTING OF AIRCRAFT SYSTEMS/COMPONENT: AVIONICS**

4.14.1 **Airborne and test equipment practice**

Demonstrate use of representative airborne radio and radar equipment and practice in servicing, and installation on the aircraft.

Removal and replacement of equipment from aircraft racks, checks on power supplies, and remote controls.

Routine maintenance inspections of equipment in

situ. Operational checks.

Understanding and use of remote specialist communications, navigation and radio test equipment for ramp

Understanding and use of system built-in test equipment (BITE),

Practicing wiring, fault tracing .

Note: * Demonstration of functional check requiring radio transmission may be carried out during field visit or OJT

4.15 JOB/TASK DOCUMENTATION AND CONTROL PRACTICES

4.15.1 Applicable standard practices, minor fault diagnosis, perform representative electrical, instrument and radio systems component removal, fitment, inspection, adjustment, servicing and operational check.

4.15.2 Reserved

INTENTIONALLY LEFT BLANK

4.16 Additional recommended facilities, tools and equipment required to accomplish the maintenance skills are given in Appendix II, III & IV.

4.17 **On-Job Practical Training**

4.17.1 For completion of the course, six months On the Job Training (OJT) shall be mandatory. These six months OJT may be given in a continuous period or may be divided into two segments of three months each. For imparting practical training on aircraft maintenance to the trainees, facilities acceptable to DGCA and as specified in Appendix V must exist.

4.17.2 The institutes shall make suitable arrangements with DGCA approved maintenance organisations having an airworthy and operating aircraft / engine/ relevant system engaged in major maintenance for practical on the job training at the end of the course.

The trainees shall be deputed to approve aircraft maintenance organisation maintaining the aircraft and engine covered by the scope of approval of the training institute.

4.17.3 Institutes (new/existing) having their own aircraft as required in Para 4.5.5/6/7 (without alternate arrangements) may give OJT, on the aeroplane/helicopter owned by them. The students should be able to carry out the maintenance schedules and other checks as called for in the AMM. The institutes shall have trained person(s) who should be able to ground run and demonstrate the systems of the aircraft to the students. These person(s) may not be licenced AMEs or factory trained, but should be fully aware of the ground run up, maintenance and repair procedures to be followed on the type of aircraft possessed by the institute. The institutes shall ensure that all safety precautions and standard maintenance practices are followed and requirements spelt out in Appendix V are fulfilled in toto.

5 **Preparation of Training Manual**

The institute shall prepare a Training Manual detailing the training policy and procedures which will be approved by DGCA. The Training Manual may be prepared containing the information given in Appendix VII for reference. Necessary supplementary procedure manual shall be prepared and approved by the accountable manager. The Training / procedure manual contents in no case shall override the CAR/Aircraft Rules and instructions issued by DGCA from time to time.

6 **QUALIFICATIONS FOR ADMISSION**

6.1 For AME training course, the candidates shall have passed minimum 10+2 class with Mathematics, Physics and Chemistry from a recognised board or university or its equivalent;

6.2 The trainees shall be subjected to a medical examination before they are admitted to the training institute by a doctor possessing at least an MBBS degree. Candidates shall not have any physical disabilities or colour blindness, which may interfere in discharging the duties as an AME.

7 PERIOD OF TRAINING

7.1 The period of training in the approved institute will be counted for the purpose of computing total aeronautical maintenance experience required for becoming eligible for appearing in the AME licence written examination.

7.2 The minimum duration of the training for various streams shall be as follows:

- (a) (LA, PE, HA & JE) Mechanical stream – Aeroplane and Powerplant Three years including six months OJT
- (b) (RA, JE & PE) Mechanical stream – Helicopter and Powerplant Three years including six months OJT
- (c) (ES, IS & RN) Avionics stream-
Three years including six months OJT

7.2.1 Institutes may at their discretion increase the duration of the course before commencement of the batch, in order to cover the prescribed syllabus with additional thoroughness. This procedure shall be documented in the training manual approved by DGCA.

7.2.2 In case a student wants to migrate from one institution to another a formal approval has to be sought from DAW(Trg.) Hdqrs.

7.3 All semesters in training institute shall contain both theoretical and practical classes in equal proportion. The period assigned for OJT shall be exclusively devoted to familiarisation / demonstration / performance of actual aircraft maintenance tasks.

7.4 During the entire period of training, each student shall maintain records of training / log book indicating the practical training he has undergone. The records of training / log book shall be signed by an instructor of the institute or the QCM of the organisation where he has undergone the practical training.

7.5 The courses shall start in the month of July each year to ensure that the students are eligible for the October examination session of the following year. The list of admitted students in a batch should be forwarded to CEO, latest by first week of September, for allotment of Computer number to the students.

7.6 The number of students in each batch shall be in commensurate with the infrastructure available and shall not exceed 30. However, no institute shall have more than two batches in each stream, in an academic year.

7.7 During any semester the practical training shall not be normally less

than 50% of total training time. Any variation in period or scope of training will have prior approval of DGCA.

7.8 Reserved

8 SEMESTER EXAMINATIONS

8.1 After completing each semester the candidate shall be subjected to an examination. Before a candidate is allowed to appear for the examination, he should have been present for at least 80% of the training period of the subject. The examination shall be conducted semester-wise every six months.

8.2 Examination papers shall be set, invigilated and checked by competent examiners designated by the Chief Instructor. Examinations shall be held at the end of each semester.

8.3 The examination papers shall be combination of quiz-type and essay-type questions.

8.4 Candidates who are successful in the semester examination shall be issued with a mark sheet by the institute giving details of the marks obtained in each subject. After successful completion of the course and verification of completion of specified aircraft maintenance tasks to be performed during the OJT, the institute shall award a serially numbered certificate, the format of which will be approved by DGCA. The record of certificate and students detail shall be maintained by the training institutes. Course completion certificate issued to the trainee should indicate the type of aircraft and powerplant or the aircraft system on which the maintenance experience was gained during the OJT.

8.5 DGCA representatives may at their discretion associate with the examination to ensure that the standard of questions and fair examination practices are followed.

8.6 To be declared successful in the course, the candidates must obtain a minimum 70% in each paper of semester examinations conducted by the institute.

8.7 Candidates may be promoted to the next semester after completion of previous semester(s). Candidates who are not successful in passing some subjects of a semester may be re-examined for those subject(s) until they pass the complete semester. For such students the application must be forwarded for DGCA AME licence examination only after he has successfully passed the required semester examinations.

8.8 The syllabus for various semesters of the Basic licence course shall be drafted to cover various modules of DGCA licensing system as given in Appendix V.

9 AME licence examination conducted by DGCA

9.1 AME licence examinations are conducted by DGCA three times in a calendar year i.e., in the months of February, June and October. The eligibility criteria for appearing in DGCA AME licence examinations shall be as given below

- (i) The students who have completed one year of approved training curriculum and successfully passed 1st and 2nd semester of the institute examination shall be allowed to appear in Paper I (Air Law, Airworthiness Requirements & Human Performance) or equivalent modules of AME/basic license examination.
- (ii) The students who have completed two years of approved training curriculum and successfully passed 3rd and 4th semester of the institute examination shall be allowed to appear in Paper II (Aircraft Engineering) or equivalent modules of AME/basic license examination.
- (iii) The students who have completed two and a half years of the approved training curriculum and successfully passed 5th semester of the institute examination will be allowed to appear in Paper III or equivalent modules of AME/ basic license examination. A student will be allowed to appear for a maximum of two categories or equivalent modules of AME/ basic license examination in a session.
- (iv) The students may appear in the remaining categories of relevant stream after successfully undergoing OJT.

10 Training Records

10.1 Student Record

The Chief Instructor shall ensure that a file is maintained for each student, wherein the following records shall be preserved on permanent basis:

- (a) The name and address and photograph of the student.
- (b) The batch and the stream in which the student is admitted.
- (c) The commencement and conclusion dates of the course.
- (d) Copies of certificates of the education qualifications – and medical record.
- (e) Attendance records of students.
- (f) Record of all practical tests/skill tests.
- (g) Computer number of the students allotted by CEO.
- (h) Semester wise performance and examination records.
- (i) A photocopy of the identity card issued to the students by the institute.
- (j) The duration and details of experience and OJT since induction.
- (k) A copy of final certificate issued by the institute.

(l) The security clearance of the student, if applicable.

10.2 Institute Records

The following records shall be maintained for a period of five years after the completion of course.

(a) The records of the employment of the instructor subject wise.

(b) Question papers and answer sheets of each student semester wise.

(c) List of the computer numbers allotted to the students by CEO batch wise.

(d) List of DGCA approved organizations having tie up with the institute to provide OJT.

(e) List of organizations having tie up with the institute to provide some elements of practical training as permitted by CAR.

(f) Paper-wise performance of the students in DGCA licence examination.

11. GRANT OF APPROVAL

11.1 Upon satisfactory compliance with the requirements given in this CAR and any other instructions issued by DGCA from time to time, a Certificate of Approval is issued to the institute. Normally the validity of approval granted to the institute will be for one calendar year. The certificate should be displayed at prominent place and a copy kept in the training manual.

11.2 The approval granted to an institute shall be deemed to be suspended if, at any time, it is found that the institute does not meet the requirements stipulated in this CAR. In such case, the institute should immediately intimate the local airworthiness office and submit an action plan to ensure compliance with the requirements. In such case the total period/duration of the course will be extended by the period the approval remain suspended.

11.3 The certificate shall be surrendered when the institute is no longer approved.

11.4 Reserved

11.5 The institute shall have a dedicated website in which it will publish information about the scope of DGCA approval, admission policy, infrastructure available, chargeable fees, course duration, OJT and various other terms and conditions. The website shall be kept updated to provide correct information to the student at all times.

Note: Approval granted by DGCA to conduct the training programme does not absolve the institute from complying with other regulatory requirements separately and possess requisite licence / approvals.

12. CONTINUANCE OF APPROVAL

12.1 Facilities, human resources, training and examination standards shall be maintained at standards not lower than those originally approved.

12.2 The institute shall carry out an internal audit of their facilities with respect to this CAR, approved training and procedure manual, take appropriate corrective and preventive action and submit a

report to local airworthiness office at least two months before the expiry of the approval. The local airworthiness office shall also conduct an inspection of the facilities of the institute to ensure compliance with this CAR before effecting renewal of the approval.

- 12.3 Prior written permission shall be obtained from the Director General of Civil Aviation in respect of any material changes in the organisation
- 12.4 Facilities shall be offered to the representatives of DGCA to inspect the institute or attend any course for the purpose of monitoring the standard of training. A minimum of two months prior information shall be given to the Director General of Civil Aviation whenever new courses are started or existing approved courses are modified. DGCA may require any amendment to the content or duration of course.
- 12.5 The institutes which consistently show results less than the national average in terms of number of candidates passing in the DGCA licence examination, in consecutive three sessions, shall not be allowed to intake fresh batches of students until the percentage of their candidates passing the DGCA licence examination improves. The results of such training schools shall be made public and placed on DGCA.
- 12.6 The aircraft maintenance related tasks and practical exercises are performed in a safe manner, following the manufacturer's recommendation and in its absence by adopting standard practices.
- 12.7 The training programme is conducted in accordance with the Aircraft Rules, 1937, this CAR and in a manner approved by the DGCA.

**PRACTICAL MAINTANCE SKILLS:
AIRFRAME---FACILITIES, TOOLS AND EQUIPMENT**

This appendix provides guidance for the kind of facilities, tools and equipment that are likely to be needed to meet the Training Objective of Para 4.6 and 4.7

Note: Items denoted by '*' are not applicable for institutes approved to impart training in Avionics Stream.

1. METALWORK AND SHEET METAL WORK WITH HAND TOOLS

1.1 For basic skills training, the training workshop should be equipped with sturdy benches mounted with vices at approximately 2-m intervals, one vice per student. Other items required include:

- a) Powered grinding wheel for tool sharpening
- b) Powered drilling machine
- c) Large surface table for precision marking-off
- d) Compressor air supply suitable for use with pneumatic hand tools
- e) Powered hacksaw for cutting stock material
- f) Sheet metal guillotine
- g) Chalkboard / whiteboard for workshop instruction and work schedule

1.2 For airframe/helicopter skills training, the facility should ideally include the following:

- a) A complete pressurized aircraft of all-metal construction with retractable landing gear, complete with engines in running order, and suitable for practicing repair and inspection duties
- b)* Hydraulic lifting jacks, fuselage cradles, lifting slings, cables and steering bars, dihedral and incidence boards, and work and tools suitable for aircraft types provided
- c) Desk for manuals and notices
- d) Display board for inspection worksheets
- e) Ground electrical power trolley
- f) Apron-type fire extinguisher trolley
- g) Hangar access equipment such as benches, trestles, ladders, chocks.
- h)* Mobile lifting equipment, i.e. small crane or overhead gantry
- i)* Spray guns for aircraft paint and dope
- j)* Oil and fuel replenishing facility
- k)* Reserved
- l)* Mobile hydraulic power source
- m)* Retraction jacks
- n) Reserved
- o) Reserved
- p) Reserved
- q) Reserved
- r) Reserved
- s) Reserved

- t) Seat and safety equipment
- 1.3 Personal tool kit. Students should have their own tools and a toolbox. This may be issued on a shop basis, i.e. a kit issued in the basic metalwork shop and be retained by the shop when the students' progress to the next phase, or students may be issued, and retain on a permanent basis, a personal basic kit which is their own property until completion of their training. The following items are suggested for basic metalwork.
- a) Measuring and marking-off tools
- 30-cm steel rule graduated in fractions of inches and millimeters
 - Outside and inside calipers
 - Try square
 - Set of feeler gauges
 - 15-cm dividers
 - Scriber
- b) Fitter's tools
- Round-nose and side-cutter pliers
 - 15-cm long screwdriver
 - Hacksaw
 - Selection of files of different sections, lengths and cuts
 - Hand drill and a set of small diameter drills
 - Set of centre and pin punches
 - Ball-pen and cross pane hammers
 - 20-cm flat chisel and a set of small chisels (including flat , cross cut and round nose)
 - plastic or hide- faced hammer sheet metal snips
 - various sizes and types of screw drivers
 - set of double – ended , open ended and ring spanners of appropriate range in sizes and appropriate type (American, BSF, Unified , or Metric) to suit available airframes
 - set of sockets wrenches with handles and accessories to suit available airframes

2 METALWORK WITH MACHINE TOOLS

- 2.1 Workshop equipment: It is not important for AMEs to acquire a high degree of skill as machine tool craftsman. A small machine shop can be incorporated in the basic metal workshop or can be housed separately, according to the premises available. It is suggested that machine tools provided should generally be the simple, robust types suitable for training and might include the following.

- a) Drill machines
 - b)* Surface grinding machine[#]
 - c)* Buffing machine
- # Facility may be contracted
- 2.2 Trainees will not normally need any specific personal tool kit. Other items may be included to suit local needs.

3* AIRFRAME/HELICOPTER FAMILIARISATION FACILITY

Facilities for developing aircraft maintenance skill is determined according to the requirements of the technicians undergoing training. In general, it is desirable that the AME students should have the opportunity to remove and replace major components and perform standard aircraft maintenance practices. Practice in inspection functions during simulated repair or maintenance activities is considered an important training element in this phase. The requirements for the training of AME on aircraft system are as follows:

- a) Ideally, a complete aircraft of all metal construction with retractable landing gear, complete with engine in running order.
- b) Alternately an all metal fuselage, wings and control surfaces of stressed skin type suitable for practicing repairs and inspection duties.
- c) Hydraulic lifting jacks, trestles, fuselage cradles, lifting slings, cables and steering bars, dihedral and incidence boards and tools suitable for aircraft types provided.
- d) Desks for manuals and notices.
- e) Display boards for inspection worksheets.
- f) Ground electrical power trolley.
- g) Fire extinguisher trolley.
- h) Hangar access equipment such as benches, trestles, ladders, chocks etc.
- i) Mobile lifting equipment i.e., small crane or overhaul gantry.
- j) Spray gun for aircraft paint and dope.
- k) Oil and fuel replenishing facility
- l) Reserved
- m) Mobile hydraulic pressure source
- n) Test boards designed to represent sections of typical aircraft cables, air and fluid systems. These should be complete with rigging instructions so that student's errors are known upon completion of training.
- o) Manufacturer's recommended tools or locally fabricated tools to perform the defined maintenance tasks
' Not applicable for Institutes having serviceable aircraft complete in all respect.

4* SPECIALIST ACTIVITIES: WOOD AND FABRIC, WELDING, AND COMPOSITES

4.1 Introduction

Equipment in the training areas for these specialist activities depends on the training requirements

4.2 Wood work and fabric workshop

Reserved

4.3 # WELDING

4.3.1 The purpose of a short course on welding is to impart enough knowledge of welding techniques to enable students to assess the airworthiness of welded joints and structures. It is not intended to produce skilled welders. The welding shop must be chosen and equipped to comply with the safety regulations for oxyacetylene and other types of welding. Metal-screened working bays with metal work benches should be built according to the number of work stations required

4.3.2 Welding equipment might include the following

- a) Set of oxyacetylene welding equipment
- b) Electric or arc welder
- c) Electric TIG or MIG welder
- d) Eye face shield, goggles, leather gloves and aprons
- e) Electrodes, welding rods and welding fluxes
- f) Electric resistance welder for spot welding (may be stored in sheet metal shop)

5.4* # Fibreglass and reinforced plastic workshop

k) Many aircraft are fitted with secondary structures constructed from fibre or glass materials. (Indeed, some aircraft even have their primary structure made of fibre or glass material). From the training point of view, only secondary structure should be of concern.

l) As far as space, a dust free, humidity controlled atmosphere, lighting and doors are concerned the workshop should follow the general pattern of the fabric shop. Fire proof storage facilities for highly inflammable and corrosive resins and activators are also required. The correct type of extinguishers must be available. The following tools should be provided for the fibreglass and reinforced plastic workshop

- a) Laying up tables
- b) Brushes and spatulas
- c) Scissors and cutters
- d) Sanders
- e) Measuring Cup
- f) Heat lamp
- g) Pots and trays

Facilities may be owned or arranged on contract.

**PRACTICAL MAINTENANCE SKILLS:
ENGINE AND PROPELLER – FACILITIES, TOOLS AND EQUIPMENT**

1 INTRODUCTION

This appendix provides guidance for the kind of facilities Tools and equipment that are likely to be needed to meet the Training Objectives of Para 4.8.

2 For engine skill training, the facility should ideally have the following:

- a) Sectioned / Dismantled engines (piston or turbine), according to the scope of approval
- b) Reserved
- c) Mobile lifting gantry for hoisting engines and heavy equipment.
- d) Engine slings and work stands
- e) Manufacturer's recommended tools or locally fabricated tools to perform the defined maintenance tasks.
- f) Reserved
- g) Reserved
- h) Reserved
- i) Propeller manufacturer's recommended tools or locally fabricated tools to perform the defined maintenance tasks
- j) Example of contemporary propeller controllers.
- k) Example of various types of magnetos.
- l) Example of various high-energy and other types of gas turbine igniter.
- m) Example of various types of carburetor and petrol Injection equipment
- n) Example of turbocharger.

3 ENGINE FAMILIARIZATION FACILITY

- 3.1 In general it is desirable that students should have the opportunity to remove and replace major components. Practise in inspection functions during simulated repair or maintenance activities is considered an important training element in this phase. The facility to develop maintenance skill of students on engines shall have the following items

- a) A complete piston engine and a turbine engine.
- b) Reserved
- c) Mobile lifting equipment (i.e., a small crane or over-head gantry lifting slings) and tools suitable for engine types provided.
- d) Desk for manuals and notices.
- e) Display board for inspection work sheets.
- f) Access and storage equipment such as benches, trestles, shelves, etc.
- g) Oil and fuel replenishing facility
- h) Test board designed to represent sections of typical aircraft/engine cable, air and fluid system. These should be complete with rigging instructions so that student errors are detected immediately*.

*Not applicable for Institutes having serviceable aircraft complete in all respect and engine with indication system in operating condition.

INTENTIONALLY LEFT BLANK

**PRACTICAL MAINTENANCE SKILLS: AVIONICS —
ELECTRICAL, INSTRUMENTS, AUTOFLIGHT AND RADIO –
FACILITIES, TOOLS AND EQUIPMENT**

1 Introduction

General Facilities for all avionics training school are as given in Appendix-II. In addition specific facilities are required relevant to Avionics stream. This appendix provides guidance for the kind of facilities, tools and equipment that are needed to meet the training objectives for institutes seeking approval in Avionics stream.

1.1 Aircraft with necessary systems in a functional condition as required in paragraph 4.6.7 and to perform the exercises listed from 4.10.1 to 4.13.6

2 Avionics Facility: Electrical

2.1 Shop equipment: - The electrical shop should be equipped with demonstration mock ups representing typical aircraft circuits. If made realistically, these can be of value for practicing adjustments and troubleshooting as well as for demonstration-safety precautions with fire warnings and extinguishing provisions. Benches should be smooth topped and have sufficient vices and power points (for soldering irons) to suit the class size planned. The following equipment items should also be available:

- a) Reserved
- b) Reserved
- c) Battery charging plant, preferably housed in a separate, well ventilated charging room. For lead acid batteries, the charging plant should be of the series type suitable for charging several batteries at different rates

Note- For charging lead acid and nickel cadmium batteries, a separate and totally isolated charging rooms and equipment will be required for each type. For nickel cadmium batteries, a constant current charger and battery analyzer must be specified

2.2 Personal tool kit

Students should have their own tools and tool box. This may be issued on a shop basis i.e., a kit in the electrical shop may contain only tools required for training in this shop and be retained by the shop when the students progress to the next phase, or students may be issued, and retain on permanent basis, a personal basic kit which is their own property until the completion of their training.. The following items are required for basic electrical work:

- a) One electric 5-mm point temperature controlled soldering iron (soldering copper)

- b) One wire stripper for removing insulation
 - c) A selection of small screw drivers (including a Phillips)
 - d) One adjustable hook wrench (18 to 50 mm)
 - e) One set of Allen Keys
- 2.3* The following types of components should be available and used as appropriate according to the potential need of the trainees:
- a) Lengths of the aircraft cabling with typical plugs , sockets , bulk head sealing bungs, grommets etc., for practicing wire work and making up looms
 - b) A selection of switches, fuses, thermal circuit breakers, wire connecting devices, junction boxes and other electrical system elements
 - c) Specimens of airborne batteries (both lead acid and nickel cadmium): sectioned, serviceable and chargeable.
 - d) DC generators and AC alternators
 - e) Voltage regulators, and other types of current limiting devices (i e., vibrator types and variable resistance types)
 - f) Various types of DC and AC motors, including engine starters, continuously rated motors, rotary and linear actuators.
 - g) Static inverters and specimens of other types of current conversion devices, such as transformer current rectifier units (TRUs)
 - h) Reserved
 - i) Specimens of aircraft electrical heating devices, such as pitot heads, thermal de-icing shoes etc.
 - j) Specimens of aircraft lighting appliances, such as cabin fluorescent lamps, landing lamps, navigation lights etc.
- 3 AVIONICS Facility : INSTRUMENT**
- 3.1 The shop should be housed in a separate room with ventilation Benches should be topped with smooth hard wood or covered with a Formica top
- 3.2 The instrument shop should be equipped with demonstration mock-ups representing typical aircraft circuits. If made realistically, these can be of value for practicing adjustments and troubleshooting as well as for demonstration. Benches should be smooth topped and have sufficient vices and power points (for soldering irons) to suit the class size planned. The following major equipment items should also be available:
- a) Reserved
 - b) Reserved

- c) Mock-up air speed indicator (ASI) system for leak test practice
 - d) Reserved
 - e) Mock up for compass swinging practice (i.e. an old aircraft or a specially made trolley which can be used on an outdoor site selected as compass base
 - f) Megger for insulation testing of electrical items.
- 3.3 The personal basic tool kits of students should be supplemented by the following items
- a) One set of watch makers screw drivers
 - b) One set of miniature spanners
 - c) One set of Allen keys (appropriate sized)
 - d) One set of Bristol spline keys
 - e) One electric temperature controlled soldering iron with fine point (similar to that issued in electrical shop)
- 3.4* The following types of components should be available and used as appropriate according to the potential need of the trainees:
- a) Boost or manifold pressure gauge
 - b) Hydraulic pressure gauge
 - c) Engine oil pressure gauge (Bourdon tube type)
 - d) Engine oil pressure gauge (electrical type)
 - e) ASI
 - f) Pitot static head
 - g) Altimeter
 - h) Rate of climb indicator
 - i) Turn and slip indicator
 - j) Directional gyroscope
 - k) Artificial horizon
 - l) Engine speed indicator (DC and AC types)
 - m) Oil thermometer (physical and electrical type)
 - n) Cylinder head and jet pipe thermocouple
 - o) Fuel content gauge (float operated and capacitance type)
 - p) Magnetic compass
 - q) Simple type Autopilot
 - r) Instrument systems with electronic amplifiers (e.g. Capacitance type fuel content gauges, cabin temperature controllers, and auto pilot)
 - s) Specimens of various types of airborne electrical instruments, including instruments embodying principles of the voltmeter, ammeter, ohmmeter, Wheatstone bridge, thermocouple, ratio meter, servos and synchros etc.
- 4 AVIONICS Facility:, NAVIGATION AND RADIO**
- 4.1 The shop should be housed in a separate room with necessary ventilation. Benches should be topped with smooth hard wood or covered with a Formica top.
- 4.2 The following test equipment items should also be available:

- a) Variable stabilized power supply unit
 - b) Signal generator
 - c) Reserved
 - d) Signal generator (UHF/VHF)
 - e) Audio frequency oscillators
 - f) Reserved
 - g) Cathode ray oscilloscope
 - h) Frequency meters
 - i) Moving coil, volt-ohm-milliammeter and multi meters
 - j) Variac
 - k) Reserved
 - l) IC/Microprocessors
 - m) Digital voltmeter/ ohmmeter/ammeter
 - n) Logic probe
 - o) RLC bridge
 - p) Voltage standing wave meters
 - q) Reserved
- 4.3* The facility should be equipped with demonstration mock-ups representing typical aircraft circuits. The following equipment may be of value for practicing adjustments and troubleshooting as well as for demonstration.
- a) High frequency transmitter receiver (HF)
 - b) Very High frequency transmitter receiver (VHF)
 - c) Automatic direction finder system
 - d) Very High frequency omnidirectional radio range / instrument landing system (VOR/ILS) system (including glide scope and marker receivers)
 - e) Distance measuring equipment system
 - f) Air traffic control transponder system (including altitude reporting mode)
 - g) Radio altimeter
 - h) Weather radar
 - i) Reserved
 - j) Navigation indicators capable of presenting combined navigation information, typically a radio magnetic indicator (RMI) and horizontal situation indicator (HSI) wired for both compass and various radio navigation inputs.
 - m) Reserved
- Note: * (2.3, 3.4 & 4.3) Separate units are not required if the institute is having corresponding serviceable aircraft system and necessary test equipment to carry out operational check of the system on ground. Facilities for transmitting radio frequencies may be outsourced
- 4.4 Necessary power supply for operating the aircraft component and replica of aircraft system meant for familiarisation, demonstration, and performing functional check as part of the practical training.

- 4.5 The personal basic tool kits of students should be same as specified for instrument facility but may be supplemented to suit local needs.
- 4.6 Reserved

INTENTIONALLY LEFT BLANK

Applied on the Job practical training: Experience (OJT)

1 Introduction:
Experience of this course takes the form of a series of supervised abilities by applying the knowledge, skill and attitude learned so far. The exercises should consist of simulated (or real , if fully supervised) maintenance tasks based on actual sample maintenance programme extracts as well as on compliance with regulations , approved maintenance organisation (AMO) procedures and amendments. This phase of the training can be on the job at an AMO, in such case the details of maintenance tasks to be performed by the trainee shall be provided to the contracted maintenance organisation by the training institute. Instead it can be given at the organisation where the trainees can receive the required practical training under the guidance and supervision of an Aircraft Maintenance Engineer (AME) instructor. In the later case, however it will expedite the trainee’s training if, in addition to “real” maintenance exercises, hypothetical situations are set up as practical exercises when time allows

2 The simulated or assumed operating conditions for each exercise must be clearly specified by the instructor. The exercises should be made as realistic as possible. Past maintenance records etc. can be used (e.g. case studies) and answers arrived at by the trainees should be compared to what actually took place. A group discussion after each exercise will be beneficial in eliminating possible misconceptions

3 The OJT should be divided into Line and Base modules

4 TRAINING OBJECTIVES

Conditions: The trainee will be provided with appropriate hangar and facilities; tools (both hand and machine); materials; an aircraft or components as applicable; aircraft maintenance manuals; AMO tasks or job cards and procedure documents.

Performance : The trainee will practice removal , replacement , dismantling, inspection , decision making regarding repair or replacement, re assembly and function testing of fault finding equipment , using both engineering drawings as well as manufacturers’ maintenance ; and tests(real or simulated)

Standard of accomplishment: During this experience phase of training, the standard is a function of the variety of exercises completed and the time spent in work shop training. The trainee / students may work individually or in team on the exercises so that they have “ownership “of the standard. If necessary, they should practice and repeat increasingly complex exercises to develop greater skills within their respective area of competence. Finally, they should function test on the aircraft

**5 APPLIED PRACTICAL LINE MAINTENANCE OPERATION:
AIRFRAME/ENGINE / AVIONICS**

The required materials and publications include the following:

- a) Extract from the approved maintenance programme
- b) Appropriate aircraft, engine or part there of
- c) Aircraft maintenance manual (AMM)
- d) Operators’ minimum equipment list (MEL)
- e) Operators maintenance control manual
- f) AMO tasks or job cards
- g) Operator’s technical log
- h) Associated technical tools or test equipment

Operating conditions defined by the instructor should include not to be limited to the following:

- a) Simulated aircraft departure time
 - b) Simulated aircraft maintenance state and age c) Availability of spare parts
 - d) Availability of role play flight crew for questioning
 - e) Statement if a defect is found, trainee must make decision to repair, replace or defer
 - f) Recording of work in accordance with AMO and operator manuals and with DGCA regulations
 - g) Simulated conditions of the maintenance facility
- Exercises should be designed to give trainees practices in the following
- a) Manual and diagnostic skills
 - b) Compilation of necessary additional work or job cards
 - c) Understanding of flight crew entries in the technical logs d) Verbal briefing and de-briefing of flight crew
 - e) Correct use of manuals such as the AMM or MEL
 - f) Making of accurate and complete entries in the technical logs, work or job cards.

**6 APPLIED PRACTICAL BASE MAINTENANCE OPERATION:
AIRFRAME/ ENGINE / AVIONICS**

Operating conditions defined by the instructor should include but not be limited to the following:

- a) Simulated stage of aircraft check completion
- b) Simulated aircraft maintenance state and age
- c) Availability of spare parts and materials
- d) Availability of role play maintenance personnel for questioning
- e) Statement if a defect is found, trainee must make decision to repair, replace or defer

- f) Recording of work in accordance with AMO and operator manuals and with DGCA regulations
- g) Simulated conditions of the maintenance facility
Exercises should be designed to give trainees practices in the following
 - a) Manual and inspection skills covering representative cross section of maintenance tasks on aircraft
 - b) Assessment of damage, corrosion etc.
 - c) Determination of appropriate repair /rectification action
 - d) Compilation of necessary additional work or job cards
 - e) Verbal briefing and de briefing of maintenance personnel
 - f) Correct use of manuals such as AMM or structural repair manuals (SRM)
 - g) Making of accurate and complete entries in the work or job cards

SYLLABUS OF DGCA AME LICENCE EXAMINATION

The revised syllabus for various DGCA papers of AME licence exam is detailed below.		
Sr. No.	Name of Paper	Detailed Syllabus of Paper
1.	Paper – I A	Air Law, Airworthiness Requirements
02.	Paper – I B Human Factors	<p style="text-align: center;">HUMAN PERFORMANCE</p> <p>B.1.1 General</p> <ul style="list-style-type: none"> • The need to take human factors into account; • Incidents attributable to human factors/human error; • 'Murphy's' law. <p>B1.2 Human Performance and Limitations</p> <ul style="list-style-type: none"> • Vision; • Hearing; • Information processing; • Attention and perception; • Memory; • Claustrophobia and physical access. <p>B1.3 Social Psychology</p> <ul style="list-style-type: none"> • Responsibility: individual and group; • Motivation and de-motivation; • Peer pressure; • 'Culture' issues; • Team working; • Management, supervision and leadership. <p>B1.4 Factors Affecting Performance</p> <ul style="list-style-type: none"> • Fitness/health; • Stress: domestic and work related; • Time pressure and deadlines; • Workload: overload and underload; • Sleep and fatigue, shiftwork; • Alcohol, medication, drug abuse.

		<p>B1.5 Physical Environment</p> <ul style="list-style-type: none"> • Noise and fumes; • Illumination; • Climate and temperature; • Motion and vibration; • Working environment. <hr/> <p>B1.6 Tasks</p> <ul style="list-style-type: none"> • Physical work; • Repetitive tasks; • Visual inspection; • Complex systems. <hr/> <p>B1.7 Communication</p> <ul style="list-style-type: none"> • Within and between teams; • Work logging and recording; • Keeping up to date, currency; • Dissemination of information. <hr/> <p>B1.8 Human Error</p> <ul style="list-style-type: none"> • Error models and theories; • Types of error in maintenance tasks; • Implications of errors (i.e accidents) • Avoiding and managing errors. <hr/> <p>B1.9 Hazards in the Workplace</p> <ul style="list-style-type: none"> • Recognising and avoiding hazards; • Dealing with emergencies.
03	<p>Paper – II General Engineering and Maintenance Practices</p>	<p>P2 .1 MATERIALS AND HARDWARE</p> <hr/> <p>P2.1.1 Aircraft Materials — Ferrous</p> <p>(a)</p> <ul style="list-style-type: none"> • Characteristics, properties and identification of common alloy steels used in aircraft; • Heat treatment and application of alloy steels; <p>(b)</p> <ul style="list-style-type: none"> • Testing of ferrous materials for hardness, tensile strength, fatigue strength and impact resistance.

	<p>P2.1.2 Aircraft Materials — Non-Ferrous</p> <p>(a)</p> <ul style="list-style-type: none">• Characteristics, properties and identification of common non-ferrous materials used in aircraft;• Heat treatment and application of non-ferrous materials; <p>(b)</p> <ul style="list-style-type: none">• Testing of non-ferrous material for hardness, tensile strength, fatigue strength and impact resistance.
	<p>P2.1.3 Aircraft Materials — Composite and Non-Metallic</p> <p>P2. 1.3.1 Composite and non-metallic other than wood and fabric</p> <p>(a)</p> <ul style="list-style-type: none">• Characteristics, properties and identification of common composite and non-metallic materials, other than wood, used in aircraft;• Sealant and bonding agents. <p>(b)</p> <ul style="list-style-type: none">• The detection of defects/deterioration in composite and non-metallic material.• Repair of composite and non-metallic material.
	<p>P2.1.3.2 Wooden structures (optional)</p> <ul style="list-style-type: none">• Construction methods of wooden airframe structures;• Characteristics, properties and types of wood and glue used in aeroplanes;• Preservation and maintenance of wooden structure;• Types of defects in wood material and wooden structures;• The detection of defects in wooden structure;• Repair of wooden structure.
	<p>P2.1.3.3 Fabric covering (optional)</p> <ul style="list-style-type: none">• Characteristics, properties and types of fabrics used in aeroplanes;• Inspections methods for fabric;• Types of defects in fabric;• Repair of fabric covering.

		<p>P2.1.4 Corrosion</p> <p>(a)</p> <ul style="list-style-type: none"> • Chemical fundamentals; • Formation by, galvanic action process, microbiological, stress; <p>(b)</p> <ul style="list-style-type: none"> • Types of corrosion and their identification; • Causes of corrosion; • Material types, susceptibility to corrosion.
		<p>P2.1.5 Fasteners</p> <p>P2.1.5.1 Screw threads</p> <ul style="list-style-type: none"> • Screw nomenclature; • Thread forms, dimensions and tolerances for standard threads used in aircraft; • Measuring screw threads;
		<p>P2.1.5.1 Bolts, studs and screws</p> <ul style="list-style-type: none"> • Bolt types: specification, identification and marking of aircraft bolts, international standards; • Nuts: self locking, anchor, standard types; • Machine screws: aircraft specifications; • Studs: types and uses, insertion and removal; • Self tapping screws, dowels.
		<p>P2.1.5.2 Locking devices</p> <ul style="list-style-type: none"> • Tab and spring washers, locking plates, split pins, pal-nuts, wire locking, quick release fasteners, keys, circlips, cotter pins.
		<p>P2.1.5.3 Aircraft rivets</p> <ul style="list-style-type: none"> • Types of solid and blind rivets: specifications and identification, heat treatment.
		<p>P2.1.5.4 Pipes and Unions</p> <p>(a)</p> <ul style="list-style-type: none"> • Identification of, and types of rigid and flexible pipes and their connectors used in aircraft; <p>(b)</p> <ul style="list-style-type: none"> • Standard unions for aircraft hydraulic, fuel, oil, pneumatic and air system pipes.

	<p>P2.1.5.5 Springs</p> <ul style="list-style-type: none">• Types of springs, materials, characteristics and applications.
	<p>P2.1.6 Bearings</p> <ul style="list-style-type: none">• Purpose of bearings, loads, material, construction;• Types of bearings and their application.
	<p>P2.1.7 Transmissions</p> <ul style="list-style-type: none">• Gear types and their application;• Gear ratios, reduction and multiplication gear systems, driven and driving gears, idler gears, mesh patterns;• Belts and pulleys, chains and sprockets.
	<p>P2.1.8 Control Cables</p> <ul style="list-style-type: none">• Types of cables;• End fittings, turnbuckles and compensation devices;• Pulleys and cable system components;• Bowden cables;• Aircraft flexible control systems.
	<p>P2.1.9 Electrical Cables and Connectors</p> <ul style="list-style-type: none">• Cable types, construction and characteristics;• High tension and co-axial cables;• Crimping;• Connector types, pins, plugs, sockets, insulators, current and voltage rating, coupling, identification codes.
	<p>P2.2 MAINTENANCE PRACTICES</p>

		<p>P2.2.1 Safety Precautions-Aircraft and Workshop</p> <ul style="list-style-type: none">• Aspects of safe working practices including precautions to take when working with electricity, gases especially oxygen, oils and chemicals.• Also, instruction in the remedial action to be taken in the event of a fire or another accident with one or more of these hazards including knowledge on extinguishing agents. <p>P2.2.2 Workshop Practices</p> <ul style="list-style-type: none">• Care of tools, control of tools, use of workshop materials;• Dimensions, allowances and tolerances, standards of workmanship;• Calibration of tools and equipment, calibration standards. <p>P2.2.3 Tools</p> <ul style="list-style-type: none">• Common hand tool types;• Common power tool types;• Operation and use of precision measuring tools;• Lubrication equipment and methods.• Operation, function and use of electrical general test Equipment. <p>P2.2.4 Avionic General Test Equipment</p> <ul style="list-style-type: none">• Operation, function and use of avionic general test equipment.
--	--	--

	<p>P2.2.5 Engineering Drawings, Diagrams and Standards</p> <ul style="list-style-type: none">• Drawing types and diagrams, their symbols, dimensions, tolerances and projections;• Identifying title block information;• Microfilm, microfiche and computerised presentations;• Specification 100 of the Air Transport Association (ATA) of America;• Aeronautical and other applicable standards including ISO, AN, MS, NAS and MIL;• Wiring diagrams and schematic diagrams.
	<p>P2.2.6 Fits and Clearances</p> <ul style="list-style-type: none">• Drill sizes for bolt holes, classes of fits;• Common system of fits and clearances;• Schedule of fits and clearances for aircraft and engines; Limits for bow, twist and wear;• Standard methods for checking shafts, bearings and other parts.
	<p>P2.2.7 Electrical Cables and Connectors</p> <ul style="list-style-type: none">• Continuity, insulation and bonding techniques and testing;• Use of crimp tools: hand and hydraulic operated;• Testing of crimp joints;• Connector pin removal and insertion;• Co-axial cables: testing and installation precautions;• Wiring protection techniques: Cable looming and loom support, cable clamps, protective sleeving techniques including heat shrink wrapping, shielding.
	<p>P2.2.8 Riveting</p> <ul style="list-style-type: none">• Riveted joints, rivet spacing and pitch;• Tools used for riveting and dimpling;• Inspection of riveted joints.

		<p>P2.2.9 Pipes and Hoses</p> <ul style="list-style-type: none">• Bending and belling/flaring aircraft pipes;• Inspection and testing of aircraft pipes and hoses;• Installation and clamping of pipes.
		<p>P2.2.10 Springs</p> <ul style="list-style-type: none">• Inspection and testing of springs.
		<p>P2.2.11 Bearings</p> <ul style="list-style-type: none">• Testing, cleaning and inspection of bearings;• Lubrication requirements of bearings;• Defects in bearings and their causes.• 28.11.2003 L 315/100 Official Journal of the European Union EN
		<p>P2.2.12 Transmissions</p> <ul style="list-style-type: none">• Inspection of gears, backlash;• Inspection of belts and pulleys, chains and sprockets;• Inspection of screw jacks, lever devices, push-pull rod systems.
		<p>P2.2.13 Control Cables</p> <ul style="list-style-type: none">• Swaging of end fittings;• Inspection and testing of control cables;• Bowden cables; aircraft flexible control systems.
		<p>P2.2.14 Material handling</p> <p>P2.2.14.1 Sheet Metal</p> <ul style="list-style-type: none">• Marking out and calculation of bend allowance;• Sheet metal working, including bending and forming;• Inspection of sheet metal work. <p>P2.2.14.2 Composite and non-metallic</p> <ul style="list-style-type: none">• Bonding practices;• Environmental conditions• Inspection methods

		<p>P2.2.15 Welding, Brazing, Soldering and Bonding</p> <p>(a)</p> <ul style="list-style-type: none">• Soldering methods; inspection of soldered joints. <p>(b)</p> <ul style="list-style-type: none">• Welding and brazing methods;• Inspection of welded and brazed joints;• Bonding methods and inspection of bonded joints.
		<p>P2.2.16 Aircraft Weight and Balance</p> <p>(a)</p> <ul style="list-style-type: none">• Centre of Gravity/Balance limits calculation: use of relevant documents; <p>(b)</p> <ul style="list-style-type: none">• Preparation of aircraft for weighing;• Aircraft weighing;
		<p>P2.2.17 Aircraft Handling and Storage</p> <ul style="list-style-type: none">• Aircraft taxiing/towing and associated safety precautions;• Aircraft jacking, chocking, securing and associated safety precautions;• Aircraft storage methods;• Refuelling/defuelling procedures;• De-icing/anti-icing procedures;• Electrical, hydraulic and pneumatic ground supplies.• Effects of environmental conditions on aircraft handling and operation.

		<p>P2.2.18 Disassembly, Inspection, Repair and Assembly Techniques</p> <p>(a)</p> <ul style="list-style-type: none"> • Types of defects and visual inspection techniques. • Corrosion removal, assessment and re-protection. <p>(b)</p> <ul style="list-style-type: none"> • General repair methods, Structural Repair Manual; • Ageing, fatigue and corrosion control programmes; <p>(c)</p> <ul style="list-style-type: none"> • Non destructive inspection techniques including, penetrant, • radiographic, eddy current, ultrasonic and boroscope methods. <p>(d)</p> <ul style="list-style-type: none"> • Disassembly and re-assembly techniques. <p>(e)</p> <ul style="list-style-type: none"> • Trouble shooting techniques
		<p>P2.2.19 Abnormal Events</p> <p>(a)</p> <ul style="list-style-type: none"> • Inspections following lightning strikes and HIRF penetration. <p>(b)</p> <ul style="list-style-type: none"> • Inspections following abnormal events such as heavy landings and flight through turbulence.
		<p>P2.2.20 Maintenance Procedures</p> <ul style="list-style-type: none"> • Maintenance planning; • Modification procedures; • Stores procedures; • Certification/release procedures; • Interface with aircraft operation; • Maintenance Inspection/Quality Control/Quality Assurance; • Additional maintenance procedures. • Control of life limited components
		<p>P2.3 ELECTRICAL FUNDAMENTALS</p>

		<p>P2.3.1 Electron Theory 1 1 1</p> <p>Structure and distribution of electrical charges within: atoms, molecules, ions, compounds;</p> <p>Molecular structure of conductors, semiconductors and insulators.</p>
		<p>P2.3.2 Static Electricity and Conduction 1 2 2</p> <p>Static electricity and distribution of electrostatic charges; Electrostatic laws of attraction and repulsion; Units of charge, Coulomb's Law; Conduction of electricity in solids, liquids, gases and a vacuum.</p>
		<p>P2.3.3 Electrical Terminology 1 2 2</p> <ul style="list-style-type: none"> • The following terms, their units and factors affecting them: ---- potential difference, electromotive force, voltage, current, resistance, conductance, charge, conventional current flow, electron flow.
		<p>P2.3.4 Generation of Electricity 1 1 1</p> <ul style="list-style-type: none"> • Production of electricity by the following methods: light, heat, friction, pressure, chemical action, magnetism and motion.
		<p>P2.3.5 DC Sources of Electricity 1 2 2</p> <ul style="list-style-type: none"> • Construction and basic chemical action of: primary cells, • secondary cells, lead acid cells, nickel cadmium cells, other • alkaline cells; • Cells connected in series and parallel; • Internal resistance and its effect on a battery; • Construction, materials and operation of thermocouples; • Operation of photo-cells.

		<p>P2.3.6 DC Circuits</p> <ul style="list-style-type: none">• Ohms Law, Kirchoff's Voltage and Current Laws;• Calculations using the above laws to find resistance, voltage and current;• Significance of the internal resistance of a supply.
		<p>P2.3.7 Resistance/Resistor</p> <p>(a)</p> <ul style="list-style-type: none">• Resistance and affecting factors;• Specific resistance;• Resistor colour code, values and tolerances, preferred values, wattage ratings;• Resistors in series and parallel;• Calculation of total resistance using series, parallel and series parallel combinations;• Operation and use of potentiometers and rheostats;• Operation of Wheatstone Bridge. <p>(b)</p> <ul style="list-style-type: none">• Positive and negative temperature coefficient conductance;• Fixed resistors, stability, tolerance and limitations, methods of construction;• Variable resistors, thermistors, voltage dependent resistors;• Construction of potentiometers and rheostats;• Construction of Wheatstone Bridge;
		<p>P2.3.8 Power</p> <ul style="list-style-type: none">• Power, work and energy (kinetic and potential);• Dissipation of power by a resistor;• Power formula;• Calculations involving power, work and energy.

		<p>P2.3.9 Capacitance/Capacitor</p> <ul style="list-style-type: none"> • Operation and function of a capacitor; • Factors affecting capacitance area of plates, distance between plates, number of plates, dielectric and dielectric constant, working voltage, voltage rating; • Capacitor types, construction and function; • Capacitor colour coding; • Calculations of capacitance and voltage in series and parallel circuits; • Exponential charge and discharge of a capacitor, time constants; • Testing of capacitors. <hr/> <p style="text-align: center;">•</p> <hr/> <p>P2.3.12 DC Motor/Generator</p> <ul style="list-style-type: none"> • Basic motor and generator theory; • Construction and purpose of components in DC generator; • Operation of, and factors affecting output and direction of current flow in DC generators; • Operation of, and factors affecting output power, torque, speed and direction of rotation of DC motors; • Series wound, shunt wound and compound motors; • Starter Generator construction. <hr/> <p>P2.3.13 AC Theory</p> <ul style="list-style-type: none"> • Sinusoidal waveform: phase, period, frequency, cycle; • Instantaneous, average, root mean square, peak, peak to peak current values and calculations of these values, in relation to voltage, current and power • Triangular/Square waves; • Single/3 phase principles.
--	--	--

	<p>P2.3.14 Resistive (R), Capacitive (C) and Inductive (L) Circuits</p> <ul style="list-style-type: none">• Phase relationship of voltage and current in L, C and R• circuits, parallel, series and series parallel;• Power dissipation in L, C and R circuits;• Impedance, phase angle, power factor and current calculations;• True power, apparent power and reactive power calculations.
	<p>P2.3.15 Transformers</p> <ul style="list-style-type: none">• Transformer construction principles and operation;• Transformer losses and methods for overcoming them;• Transformer action under load and no-load conditions;• Power transfer, efficiency, polarity markings;• Calculation of line and phase voltages and currents;• Calculation of power in a three phase system;• Primary and Secondary current, voltage, turns ratio, power, efficiency;• Auto transformers.
	<p>P2.3.16 Filters</p> <ul style="list-style-type: none">• Operation, application and uses of the following filters:• low pass, high pass, band pass, band stop.
	<p>P2.3.17 AC Generators</p> <ul style="list-style-type: none">• Rotation of loop in a magnetic field and waveform produced;• Operation and construction of revolving armature and revolving field type AC generators;• Single phase, two phase and three phase alternators;• Three phase star and delta connections advantages and uses;• Permanent Magnet Generators.

		<p>P2.3.18 AC Motors</p> <ul style="list-style-type: none">• Construction, principles of operation and characteristics of: AC synchronous and induction motors both single and polyphase;• Methods of speed control and direction of rotation;• Methods of producing a rotating field: capacitor, inductor, shaded or split pole.
		<p>➤</p>
		<p>P2.4.1.2 Transistors</p> <p>(a)</p> <ul style="list-style-type: none">• Transistor symbols;• Component description and orientation;• Transistor characteristics and properties. <p>(b)</p> <ul style="list-style-type: none">• Construction and operation of PNP and NPN transistors;• Base, collector and emitter configurations;• Testing of transistors.• Basic appreciation of other transistor types and their uses.• Application of transistors: classes of amplifier (A, B, C);• Simple circuits including: bias, decoupling, feedback and stabilisation;• Multistage circuit principles: cascades, push-pull, oscillators, multivibrators, flip-flop circuits.

		<p>P2.4.1.3 Integrated Circuits</p> <p>(a)</p> <ul style="list-style-type: none">• Description and operation of logic circuits and linear circuits/operational amplifiers. <p>(b)</p> <ul style="list-style-type: none">• Description and operation of logic circuits and linear circuits;• Introduction to operation and function of an operational amplifier used as: integrator, differentiator, voltage follower, comparator;• Operation and amplifier stages connecting methods: resistive capacitive, inductive (transformer), inductive resistive (IR), direct;• Advantages and disadvantages of positive and negative feedback. <hr/> <p>P2.4.2 Printed Circuit Boards</p> <ul style="list-style-type: none">• Description and use of printed circuit boards.
--	--	--

		<p>P2.4.3 Servomechanisms</p> <p>(a)</p> <ul style="list-style-type: none">• Understanding of the following terms: Open and closed loop systems, feedback, follow up, analogue transducers;• Principles of operation and use of the following synchro system components/features: resolvers, differential, control and torque, transformers, inductance and capacitance transmitters. <p>(b)</p> <ul style="list-style-type: none">• Understanding of the following terms: Open and closed loop, follow up, servomechanism, analogue, transducer, null, damping, feedback, deadband;• Construction operation and use of the following synchro system components: resolvers, differential, control and torque, E and I transformers, inductance transmitters,• capacitance transmitters, synchronous transmitters;• Servomechanism defects, reversal of synchro leads, hunting.
		<p>P2. 5. DIGITAL TECHNIQUES ELECTRONIC</p>
		<p>INSTRUMENT SYSTEMS</p> <p>P2.5.1 Electronic Instrument Systems</p> <ul style="list-style-type: none">• Typical systems arrangements and cockpit layout of electronic instrument systems.

	<p>P2.5.2 Numbering Systems</p> <ul style="list-style-type: none">• Numbering systems: binary, octal and hexadecimal;• Demonstration of conversions between the decimal and binary, octal and hexadecimal systems and vice versa.
	<p>P2.5.3 Data Conversion</p> <ul style="list-style-type: none">• Analogue Data, Digital Data;• Operation and application of analogue to digital, and digital to analogue converters, inputs and outputs, limitations of various types.
	<p>P2.5.4 Data Buses</p> <ul style="list-style-type: none">• Operation of data buses in aircraft systems, including knowledge of ARINC and other specifications.
	<p>P2.5.5 Logic Circuits</p> <p>(a)</p> <ul style="list-style-type: none">• Identification of common logic gate symbols, tables and equivalent circuits;• Applications used for aircraft systems, schematic diagrams. <p>(b)</p> <ul style="list-style-type: none">• Interpretation of logic diagrams.

APPENDIX 'VII'

GUIDELINES FOR PREPARATION OF TRAINING MANUAL

The format of Training Manual shall have (i) Preface (ii) Contents (iii) LEP. It should be in loose leap binder form. Training Manual shall contain at least the following:

1. Certificate by Accountable Manager.
2. Location and layout of the institute.
3. The Scope of approval of the institute and the list of approved courses along with duration of training period in terms of No. of hours/months of theory and practical classes.
4. The names, qualifications and experience of chief instructor and all regular instructors and their field of specialisation, if any.
5. Responsibilities of chief instructor and all other regular instructors
6. The qualification of the individuals who would be admitted to the course and criteria and method of selection for admission.
7. Attendance requirements of the individuals who would be admitted to the course
8. Syllabus for each course phase wise for which approval is required. The syllabus shall list the Headings under which the subject matter will be presented and the sequence in which training will be imparted along with details of the subject that will be covered. The syllabus should also include appropriate time allotted to each topic.
9. Details of training aids including aircraft, engine, systems, mock-ups and equipment available.
10. Details of technical literature, periodicals and books available and the manner of making them available to the students.
11. Details of practical training that will be imparted to the candidates along with approximate period to be spent for each portion of the practical training.
12. The manner of conducting semester examination to assess the performance of trainees continuously and qualifying pass marks.
13. The manner in which the OJT will be conducted.
14. The manner in which the trainees failing in a few subjects would be coached additionally and examined subsequently.
15. Records to be maintained --- Type of records and duration, Records of foreign students along with their security clearance and visa validity.
16. Samples copies of Mark sheets/ Certificates to be issued to candidates after successful completion of semester/ full course, respectively.

APPENDIX 'VIII'

**MINIMUM RECOMMENDED TEXT BOOKS
AIRCRAFT MAINTENANCE ENGINEERING TRAINING INSTITUTE**

The following books prescribed by Central Examination Organisation of DGCA should be available with the institute library:

Paper I :

Aircraft Manual
Civil Aviation Requirements (Section 2- Airworthiness)
Aeronautical Information Circulars
(relating to Airworthiness)
Airworthiness Advisory Circulars
Aircraft Maintenance Engineers' Notices

Paper II :

Civil Aircraft Inspection Procedures
(CAP 459-Part I, Basic)
Airframe & Powerplant Mechanics
(General Handbook EA-AC 65-9A)
Shop Theory by James Anderson Earl E. Tatro
Training Manual General Section Book 1 thru 7 by Dale
Crane. Aircraft Materials & Processes by Titterton
Machine Drawing by AC Parkinsons
Advanced Composites (EA-358) by Cindy Foreman
Digital Fundamentals by Malvino and Leech Standard
Aviation Maintenance Hand book EA-282-0
Standard Aircraft Handbook (5th Edition) -Larry Reithmaier

PAPER III

AIRFRAME : (LIGHT AEROPLANES)

Airframe and Powerplant Mechanics (AC 65-1 5A)-Airframe Hand
Book Aircraft Materials and Processes- by George F.Titterton.
Mechanics of Flight By -A.C.Kermode
Civil Aircraft Inspection Procedure (CAP 459) Part II Aircraft
Aircraft Maintenance and Repair (6th Edi) -By Kroes, Watkin and
Delp Acceptable Methods, Techniques and practices
(FAA)-EA-AC 43.13-1 A&2A
Aircraft Construction Repair and Inspection
-by Joe Christy

Light Aircraft Maintenance-by J . E. Heywood
Light Aircraft Inspection-by J.E.Heywood
Aircraft Electrical Systems-by E. H.J.Pallett
Aircraft Instruments-by E.H.J.Pallett
Automatic Flight Controls-by E.H.J. Pallett
Advanced Composites (EA-358) -by Cindy Foreman
Airframe and Powerplant Mechanics-(EA-AC 65-9A)-General Hand Book

PAPER III

AIRFRAME : (HELICOPTERS)

The helicopter and How to Fly-by John Fay basic
helicopter maintenance-by Joseph Schafer
(Order No.EA-HF-2) IAP inc.
Basic Helicopter Hand Book-by FAA EA
AC 61-1 3B
Helicopter Aerodynamics-by R.W.Prouty
Aircraft Materials and Processes - -
by George F. Titterton
Advanced Composites(EA-358)-by Cindy
Foreman Civil Aircraft Inspection Procedure
(CAP 459) Part II Aircraft.
Rotary Wing Aerodynamics-by W.Z.Stepniewski
(Dover Publication Inc)
Basic Helicopter Aerodynamics-by J.Seddon (BSP Professional
Books) Aircraft Electrical System-by E.H.J.Pallett
Aircraft Instruments-by E.H.J.Pallett
Automatic Flight Control-by E. H.J.Pallett

PAPER III

AIRFRAME : (HEAVY AEROPLANE)

Airframe and Powerplant Mechanics(AC 65-1 5A) -Airframe Hand Book
Civil Aircraft Inspection Procedure (CAP 459) Part II Aircraft
Advanced Composites(EA-358)-By Cindy Foreman
Any Books of Manuals covering all basic systems
of Modern Heavy Transport Airplane
Aircraft Repair Manual (FAA-AC-43.13)- By Larry Reithmaier
Aerodynamics-By Clancey
Aircraft Construction Repair and Inspection -By Joe Christy
Practical Aircraft Electronics System- by Albert Helfrick
Aircraft Materials and Processes-by George F.Titterton
Mechanics of Flight-by A.C.Kermode
M. GUILLON:'Hydraulic Servo Systems', McGraw- Hill co., New York
Aircraft Instruments-by E.H.J.Pallett

POWER PLANT : (PISTON ENGINES)

Airframe and Powerplant Mechanics (EA-AC 65-12A)
-Power Plant Hand

Book Power Plant-By Bent and Mckinley
Civil Aircraft Inspection Procedure (CAP 459) Part II
Aircraft Propeller and Controls-by Frank Delp
A&P Technicians Powerplant Text book- (EA-ITP-
P) Aircraft Piston Engines-By Herschel Smith
Airframe and Power Plant mechanics-General
Hand Book (EA-AC65-9A)

PAPER III

POWER PLANT : (TURBINE ENGINES)

IRWINE TREAGER: 'Aircraft Gas Turbine Technology
McGraw-Hill Book Company.

ROLLS ROYCE LIMITED: 'The Jet Engine' Product
Support (Graphics) Limited Derby, England.

UNITED TECHNOLOGIES P&W OPER/INSR 200 (Latest
Edition): 'The Aircraft Gas Turbine Engine and
Its Operation' United Aircraft Corporation.

Any Books or Manual covering all basic systems of Modern Jet Engine

JACK V. CASAMASSA and RALPH D. BENT: 'Jet Aircraft Power Systems' -
McGrawhill Co..

TRAINING NOTES: 'Gas Turbine Engines' Turbomeca,
Bordes, France.

DALE CRANE and NEAR CARLSON : 'Encyclopaedia
for Aviation Technologies' Distributor
-The English Book Store, Connaught Circus New Delhi

M. GUILLON: 'Hydraulic Servo Systems', McGraw-Hill co., New York

JOHN ANDERSON: 'Introduction to
Flight', McGraw-Hill Co., New York

Civil Aviation Authority: 'Civil Aircraft
Inspection Procedure (CAP459) Part-II

M. J. KROES, T. W. Wild, R. D. Bent and J. L. MCKINLEY;
'Aircraft Power Plants' McGraw-Hill co., New York.

FRANK DELP : 'Aircraft Propellers and Controls'
Distributor-The English Book Store
Cannought Circus, New Delhi

E. MANGHAM, A. PEACE : 'Jet Engine Manual',
Distributor-The English Book Store,
Cannought Circus, New Delhi

ELECTRICAL SYSTEM

Electrical Technology-by B. L.Theraja
Aircraft Electrical System-by E . H .J .
Pallett Basic Electronics-Bemard Grob
Digital Computer Fundamentals-by Malvino
Micro Electronics Aircraft System- by
E.H.J.Pallett Basic Electricity-by Dale Crane
Aviation Electronics Vol.I(Every Pilot Guide to Aviation Electronics-by
John M.Ferrara -Air and Space Company)
Principles of Servo mechanism-by A Typers & R.B.Miles
Aircraft Electricity and electronics-by Bent Mekinley and also by
Eismin/ Bent Mekinley (M.C.Graw Hill Publication)
Civil Aircraft Inspection Procedure-Part II
Integrated Electronics-Millman and Halkias

PAPER III

INSTRUMENT SYSTEM

Aircraft Instruments-by
E.H.J.Pallett Automatic Flight
Control-by E.H.J.Pallett
Digital Principles and Applications -by Malvino and
Leech Basic Electronic -by Bemard Grob
Aircraft Instruments-by C.A.Williams
Integrated Electronic-Millman
and Halkias
Aircraft Engineers hand Book No. 4 Instruments - by R.W.Sloley and
W.H.Coulthard Civil Aircraft Inspection Procedure-Part
II Electrical Technology-by
B. L.Theraja
The Mechanism of Inertial Position and Heading Indication by Winston Merkey
John Hovorka
Principles of Servomechanism-by A Typers and R.B.Miles
Aircraft Oxygen System (AMP Technical Publications)- by Robert Scheppler
and Dale Crane

PAPER III

RADIO COMMUNICATION AND NAVIGATION

SYSTEMS Aircraft Radio System-by J.Powell
Electronic Communication System by George
Kennedy Integrated Electronics-Millman and
Halkias Digital Fundamentals-By
Malvino and Leech
Avionics System-by Donald &
Middleton Manual of Avionics -
by Brian Kendal
Microelectronics in Aircraft Systems- by E.H.J.Pallett

**CIVIL AVIATION REQUIREMENTS
SERIES 'E', PART VIII**

Communication Engineering-by
Anner Basic Radio Vol.1 to 4-by

SECTION 2-AIRWORTHINESS

30th MAY, 2008

M.Trepper Aviation electronics- by
Keith W.Bose Aircraft-Electricity and
Electronics
(5th Edition)-by Thomas K.Eismin
Communication Principles Vol.I-Ashok
Raj.
